Abstract

SYNTHESIS AND BIOLOGICAL EVALUATION OF 1-{5-[(9H-carbazol-9-yl)methyl]-2-methyl-1,3,4-oxadiazol-3(2H)-yl}ethanone, ring were synthesized by the condensation of 2-(9H-carbazol-9-yl)acetohydrazide with 2-(9H-carbazol-9-yl)-N'-ethylideneacetohydrazide and acetic anhydride. To this reaction was subjected. It forms 2-{1-(4-acetyl-5-methyl-5-(trifluoromethyl)-4,5-dihyro-1,3,4-oxadiazol-2-yl)methyl)-1H-indol -3-yl]-3-(p-tolyl)thiazolidin-4-one. The structure of these newly synthesized compounds were characterised by 1H NMR, 13C NMR, Mass, IR, and elemental analysis.

Keywords: 1, 3, 4-oxadiazole; Acetic Anhydride; Carboxazole

Introduction

Hetero cyclic compounds represents an important class of biological molecules. The hetero cyclic molecules which, posses indole, 1,3,4-oxadiazole moieties exhibit wide range of biological activities. Carbazoles are one of the most important alkaloids molecules found extensively in biological systems, which play vital role in many of the biochemical process. The classical indole drugs constitute an important basic Skelton and development of the drug. The classical indole drugs are indomethacin and indoxole. Indole derivatives found to posses high which includes, antibacterial, analgesic, anti pyretic, antifungal, antilamatory, antihminic, cardiovascular, anticonvulsant and selective COX-2 inhibitory activities. 1,3,4-oxadizoles has become an important synthon for the development new therapeutic agents. Compounds with 1,3,4-oxadiazole core substantiate for broad spectrum of biological activities including antimicrobial [1], antifungal [2], anti-inflammator [3], anticonvulsant [4], antioxidant, analgesic [5] and mutagenic activity [6]. Compounds containing quinoline moiety are most widely used as antimalarial [7], antibacterials [8], antifungals [9], anticancer agents [10] and potential HIV-1 integrase inhibitors [11-12].

Synthesis of 2-(9H-Carbazol-9-yl)-N’-Ethylideneacetohydrazide(3)

To the solution of 2(a) (0.01mole) in hot methanol (25ml), acethophenone(0.01) and a drop of glacial acetic acid were added. The solid that seperated on refluxing for 3 hours was filtered wash with cold methanol and recrystalised from methanol to give 7(a). M.P 236°C, yield 84%.

IR (KBr) vmax (cm–1):
3418.21 (N–H), 2360.4–2922.59 (Ar–H); 1H NMR
(CDCl3) δ: 10.2 (s, N–H, 2H), 7.2–8.33 (m, Ar–H, 8H). Mass (m/z, %): M+ 167.8; Anal. calcd. for C, 86.20; H, 5.43; N, 8.38%; Found: C, 86.21; H, 5.42; N, 8.37%.

**Synthesis and Biological Evaluation of 1-(5-((9H-Carbazol-9-yl)Methyl)-2-Methyl-1,3,4-Oxadiazol-3(2H)-yl) Ethanone(4)**

A mixture of carbazole derivatives and acetic anhydride(5) (0.01 mol) was heated at 100−120 oC in presence of excess is added. After cooling, the mixture was poured into crushed ice, and neutralized with 5% aq.NaHCO3 solution. The precipitated solid was filtered and purified using column chromatography (petroleum ether:ethyl acetate, 9:1).

Yield: 60% mp 190.7℃. IR (KBr) cm−1: ν 3150 (N-H), 3050-2750 (C-H). 1H-NMR (CDCl3): δ, 7.65 (d, 1H, 1H-indazole H4, J = 7.6), 7.35 (d, 1H, indole H7, J = 8), 6.80-6.85 (m, 3H, indole H2, H5, H6), 7.35-7.45 (m, 5H, phenyl group), 3.80 (s, 2H, C-CH2 -N), 3.25 (t, 4H, piperazine H3, H5, J = 4.8), 2.70 (t, 4H, piperazine H2, H6, J = 4.8), Anal. Calc. for: C, 78.32; H, 7.26; N, 14.42%, found: C, 78.18; H, 6.94; N, 14.25%.

**Antibacterial Activity**

The anti-bacterial activity of synthesized compounds was studied by the disc diffusion method against the following pathogenic organisms. The gram-positive bacteria screened were staphylococcus aureus NCCLS 2079. The gram negative bacteria screened were Escherichia coli NCCLS 2065 and pseudomonas aeruginosa NCCLS 2200. The synthesized compounds were used at the concentration of 250 μg/ml and 500μg/ml using DMSO as a solvent the Cefaclor 10μg/ml disc was used as a standard. (Himedia, Laboratories Ltd, Mumbai). The test results presented in the Table 1 and (Figure 1) suggest that 4b,4d,4e exhibit high activity against the tested bacteria, the rest of the compounds were found to be moderate active against the tested microorganisms [13-14].

**Antifungal activity**

The antifungal activity of synthesized compounds were studied by disc diffusion method against the organisms of Penicillium and Trichophont. Compounds were treatd at the concentrations of 500μglm and 1000μglm using DMSO as solvent. The standard used was Clotrimazole 50μglm against both organisms.
