Abstract

Researchers have been investigating new active principles from time tested plants which have been used as medicinal remedies through the ages by the native people. Nyctanthus arbor-tristis (NA) Linn. is also very useful traditional medicinal plant of India, which has been cultivated for ornamental use and medicine as well. It is distributed throughout in sub-Himalayan regions and southwards to Godavari. Virtually each part of the plant has some medicinal value and is thus investigated extensively. It has been traditionally used to treat many ailments. We have tried to do a review of the existing literature and to present the entire work in a very comprehensive manner. We have also emphasized that more extensive research is warranted to proper exploration of this wonder medicinal plant as it is very cheap and widely distributed.

Keywords: Nyctanthus; Flavonoids; Phytochemical; Anti-Panosomal; Diuretic; Indian Herb

Abbreviations: PO: Peroral; SC: Subcutaneous; EMCV: Encephalo Myo Carditis Virus; SFV: Semliki Forest Virus; SOD: Superoxide Dismutase; CAT: Catalase; SGPT: Serum Glutamic Pyruvic Transaminase; SGOT: Serum Glutamic Oxaloacetic Transaminase

Introduction

Nyctanthes arbor-tristis Linn. (Oleaceae) is popularly known as 'Night Jasmine' or ‘Harsinghar’ (Hindi) due to the fact that its flowers emit a very strong and pleasant fragrance during the whole night [1,2]. The flowers start falling after midnight and by the day break, the plant appears dull. The generic name ‘Nyctanthus’ has been coined from two Greek words ‘Nykhta’ (Night) and ‘anthos’ (flower) [3,4]. The specific name ‘arbor-tristis’ meaning ‘the sad tree’ is supposedly derived from dull looks of the tree during daytime [5]. It is a terrestrial woody perennial having life span of 5-20 years. The shrub grows to a height of 10 meters. The simple leaves are opposite, with an entire margin about 6-12 cm long and 2 - 6.5cm wide. The flowers are fragrant with a five to eight lobed corolla and orange- red centre, often seen in a cluster of 2 to 7. The fruit is flat, brown and heart-shaped to rounded capsule, around 2cm in diameter with two sections, each containing a single seed. Nyctanthes is commonly known as:

- Night flowering jasmine
- Coral jasmine
- Parijat in Hindi
- Paariijaatham in Telugu
- Shephali in Oriya

Plant perspective

In its native habitat, Nyctanthes arbor-tristis is found on rocky ground in dry hillsides and as undergrowth in dry deciduous forests. It is native to southern Asia, stretching across northern Pakistan and Nepal through northern India to southeast Thailand. It grows at sea level up to 1500m altitude, within a wide range of rainfall patterns from seasonal to non-seasonal and is tolerant to moderate shade. In India it is found in outer Himalayas, Jammu, Nepal, Tripura, flowering usually from July to October. The Plant has been classified as follows:

- Kingdom : Plantae
- (Unranked) : Angiosperms
- (Unranked) : Eudicots
- (Unranked) : Asterids
- Order : Lamiales
- Family : Oleaceae
- Genus : Nyctanthes
Nyctanthus arbor-tristis revealed the presence of phytosterols, phenolics, tannins, flavonoids, glycosides and saponins. The secondary metabolites such as glycosides and alkaloids are the largest groups of chemicals produced by this plant [6,7]. Extracts of the seeds, flowers and leaves possess immunostimulant, hepatoprotective, antileishmanial, antiviral and antifungal activities in-vitro. The bark contains a glycoside and two alkaloids, one soluble in water and the other soluble in chloroform. Its roots are composed of alkaloids, tannins and glucosides. The glycosides are iridoid glycosides and phenylpropanoid glycosides [8-10], Iridoid glucosides, arbortristoside A, B, D and E have been isolated from seeds [11-13]. The maninitol is abundantly found in the flower of NA. Flower contain a modified diterpenoidnycanthin, flavonoids, anthocyanins and essential oil which is similar to jasmine (9). Stem of NA contains glycoside – naringenin – 4’-O-B-glucopyranosyl-cc-xylopyranoside and B-sitosterol [14-15].

Pharmacologic Activities

Phytochemistry

Phytochemistry analysis of leaf, fruit and seeds of NA revealed the presence of phytosterols, phenolics, tannins, flavonoids, glycosides and saponins. The secondary metabolites such as glycosides and alkaloids are the largest groups of chemicals produced by this plant [6,7]. Extracts of the seeds, flowers and leaves possess immunostimulant, hepatoprotective, antileishmanial, antiviral and antifungal activities in-vitro. The bark contains a glycoside and two alkaloids, one soluble in water and the other soluble in chloroform. Its roots are composed of alkaloids, tannins and glucosides. The glycosides are iridoid glycosides and phenylpropanoid glycosides [8-10], Iridoid glucosides, arbortristoside A, B, D and E have been isolated from seeds [11-13]. The maninitol is abundantly found in the flower of NA. Flower contain a modified diterpenoid nycanthin, flavonoids, anthocyanins and essential oil which is similar to jasmine (9). Stem of NA contains glycoside – naringenin – 4′-O-B-glucopyranosyl-cc-xylopyranoside and B-sitosterol [14-15].

Medicinal Usage

Virtually all parts of the plant have been used in different diseases and in different indications. By and large, different parts have following activities like:

- a. Leaves – antibacterial, anti-inflammatory, anti-fungal, anti-pyretic
- b. Flowers – anti-filarial, antioxidant, diuretic
- c. Seeds – antifungal, antibacterial, antileishmanial, immunomodulatory
- d. Stem – antipyretic and antioxidant
- e. Bark – anti-microbial
- f. Flower oil – as perfume

Antioxidant Activity: Nyctanthus arbor-tristis revealed the presence of flavonoids, tannins, saponins, glycosides, alkaloids, steroids and phenolic compounds. Phenolic compounds have been recognized as antioxidant agents, which act as free radical terminators [24-26]. Phytochemical screenings of the ethanolic extract of the leaves and stems of aqueous and alcoholic extracts of dried leaves of NA also have adequate antioxidant activity. The encouraging results of NA with the various in vitro antioxidant tests proved the plant as a reducing agent and effective as scavenger of hydrogen peroxide and free radicals. The overall antioxidant activity of NA might be attributed to its polyphenolic content and other phytochemical constituents [26].

Anticancer Activity: The anticancer activity of NA was first reported by Khatune et al. who have found petroleum ether, chloroform and ethyl acetate extracts of flowers to exhibit significant cytotoxic activity [14]. Recently, methanolic extract of stem bark has been reported to exhibit significant anticancer activity in comparison to 5-fluorouracil against Dalton’s ascetic lymphoma in Swiss albino rats [9].

Antiviral Activity:

Pharmacologic Activities

Biological activity of NA has been reported from the crude extracts and their different fractions from leaf, bark, root, seed, oil [16-18]. Crude extracts of different parts of NA have been used as traditional medicine for the treatment of various diseases. Use of different parts of NA in Ayurveda, Siddha and Unani systems of medicines has been prescribed from time immemorial [19-21]. Traditionally the powdered stem bark is given in rheumatic joints pain, in treatment of malaria and also as expectorant. The plant has been screened for antihistaminic activity, CNS activity (i.e. hypnotic, tranquilizing, anesthetics), analgesic, anti-inflammatory, antipyretic, antitussic, antirheumatic, anti-inflammatory, antimalarial, antihistaminic, antiparasitic, antioxidants, antiallergic, antiviral and immunomodulatory activities [22,23].

Antioxidant Activity: Nyctanthus arbor-tristis revealed the presence of flavonoids, tannins, saponins, glycosides, alkaloids, steroids and phenolic compounds. Phenolic compounds have been recognized as antioxidant agents, which act as free radical terminators [24-26]. Phytochemical screenings of the ethanolic extract of the leaves and stems of aqueous and alcoholic extracts of dried leaves of NA also have adequate antioxidant activity. The encouraging results of NA with the various in vitro antioxidant tests proved the plant as a reducing agent and effective as scavenger of hydrogen peroxide and free radicals. The overall antioxidant activity of NA might be attributed to its polyphenolic content and other phytochemical constituents [26].

Anticancer Activity: The anticancer activity of NA was first reported by Khatune et al. who have found petroleum ether, chloroform and ethyl acetate extracts of flowers to exhibit significant cytotoxic activity [14]. Recently, methanolic extract of stem bark has been reported to exhibit significant anticancer activity in comparison to 5-fluorouracil against Dalton’s ascetic lymphoma in Swiss albino rats [9].

Immuno-Stimulant Activity: Plant extracts have been widely investigated for their possible immunomodulatory properties [27]. Aqueous leaf extract of NA has been found as a potent immunomodulator as evidenced by both humoral and cell mediated responses [28,29]. Flowers have also been shown to possess immuno-stimulant activity by activating the cell mediated immune system [28]. The ethanolic seed and root extracts of NA also showed immunomodulatory activity against systemic candidiasis in mice.

Hepatoprotective Activity: Ethanolic leaf extract of NA protect against carbon tetrachloride-induced hepatotoxicity in rat. For this investigation roots were protected with extract (1000mg/kg) body weight / day, Peroral (PO) for 7 days) prior to the administration of a single dose of ccl₄ (1.0ml/kg) subcutaneous (SC). The samples of blood were collected at 48 hours after ccl₄ administration (9 day) from the abdominal aorta under pentobarbitone anesthetized (350mg/kg) silymarin (70mg/kg body weight / day PO for 7 days) were used as a reference standard. The mechanism involves the blockade of bio-activation of (CCl₄) through inhibition of p450 enzymes. In other investigation roots were protected with extract (1000mg/kg body weight / day, Peroral (PO) for 10 days) prior to the administration of blood were collected at 48 hour after ccl₄ administration (9 day) from the abdominal aorta under pentobarbitone anesthetized (350mg/kg) silymarin (70mg/kg body weight / day PO for 7 days) were used as a reference standard. The mechanism involves the blockade of bio-activation of (CCl₄) through inhibition of p450 enzymes. In other investigation roots were protected with extract (1000mg/kg body weight / day, Peroral (PO) for 7 days) prior to the administration of ccl₄ activity in comparison to 5-fluorouracil against Dalton’s ascetic lymphoma in Swiss albino rats [9].

Antiviral Activity: The ethanolic extract, n-butanol fractions and two pure compounds, arbortristoside C, isolated from the NA possess pronounced inhibitory activity against encephalomyocarditis virus (EMCV) and Semliki forest virus (SFV). The in-vivo ethanolic extract and the n-butanol fraction at daily doses of 125mg/kg weight protected EMCV infected mice against SFV by 40 and 60% respectively [30].

Antimicrobial And Antifungal Activities: Plant extracts and tannins in ethanolic extract of leaves are found to be active against Staphylococcus aureus and Salmonella paratyphi. Antimicrobial evaluation of aqueous and alcoholic extract of leaves against numerous gram positive and gram negative strains revealed that Salmonella typhimurium,
Oral administration of chloroform and ethyl acetate extracts of fresh and dried leaf, flowers, fruit and seeds are also reported to have a dose-dependent antibacterial activity against gram negative bacteria. The activity has been found significant for fresh plant materials than the dried plant parts. The stem bark extracts (petroleum ether, chloroform and ethanol) are found to have potential antimicrobial activity against S. aureus, Micrococcus luteus, B.subtilis, E.coli, Paeruginosa, Candida albicans and Aspergillus niger [32,33].

**Anti-Allergy Activity:** The pretreatment of guinea pigs exposed to histamine aerosol with a water soluble portion of the alcoholic extract of NA leaves offered significant protection against the development of asphyxia [34]. Arbortristoside A and arbortristoside C present in NA were reported to be anti-allergic [26].

**Anti-Diabetic Activity:** Oral administration of chloroform extracts of leaf and flower and 50% ethanolic extract of leaves significantly increase superoxide dismutase (SOD) and catalase (CAT) levels and cause a significant reduction in liver lacto peroxidase (LPO), serum levels of SGPT , SGOT , alkaline phosphatase, cholesterol and triglyceride levels in comparison to the diabetic controls. Ethanol extract of the stem bark also possess significant anti-diabetic activity when treated in streptozocin-nicotinamide induced diabetic rats. The extract lowers the blood glucose level in a dose-dependent manner [35,36].

**Anticholinesterase Activity:** The aqueous extract of NA stimulated the activity of acetylcholinesterase in mice; it antagonizes the inhibition of this enzyme by malathion. The higher effects were seen in the brain [37]. The low Anti-muscarinic activity against acetylcholine induced contractions of isolated rabbit ileum was already reported [38].

**Miscellaneous Activities:** Acetone extract of the seeds exhibit ovicidal effect on the eggs of rice moth, Corcyra cephalonica. The inhibition of egg hatching increased with increase in concentration of plant extracts in contact toxicity test. 80-73% ovicidal action was observed at 100% concentration of the extract. Petroleum ether extract of NA also exhibits insecticidal activity against Bagradacruiciferum. The ethanolic extract of NA leaves, seed and roots were scanned portion of an ethanol extract of the leaves exhibit significant aspirin like antinociceptive activity but failed to produce morphine like analgesia.

**Conclusion**

NA easily available and no special conditions are required for its collection and cultivation. It is a valuable medicinal plant and a unique source of useful metabolites such as alkaloids, phytosterols, phenolics, tannins, flavonoids, glycosides and saponins. For the last few years, there has been an increasing awareness for NA research. Several therapeutically and industrially useful preparations and compounds have also been marketed, which generates enough encouragement among the scientists in exploring more information about their medicinal plant. Potential of this plant in management of various diseases makes it a plant of clinical interest. Though plant has been found to be safe but the potent curvature effects of the plant against particular human ailment need to be verified by more controlled and exhaustive clinical trials.
