Introduction

TM are the group of the health practices which are of the long term uses and they are practices over the long period of time. It includes the health practices and the products, the therapy was the plant and animals and the mineral based products and the other things, some of them were the spiritual therapies which were coined for the treatments of the several kinds of the disorders. TM functions as the alternative system of the medicines, which are developed over thousands of the years of the research and work [1-5]. TM is not only the vital sources of the medicine but also it is the main sources of the income for the many of the local peoples of the world. There are many international and national policies in the TM in the several countries by which they save their generation of the wild drugs plants and their products. Here in this reviewed article we are working on the some of the aspects of the genus Anemone pulsatilla. The species is belonging to the family Ranunculaceae, the genus is also known as the wind flower, Anemone word is taken from the Greek language and meaning of the genus is the wind flower. The plant grows in the windy places. The genus grows in the alpine Himalayas, in the European country in the England and Siberia, the plant parts that is used is the flowering herb.

Abstract

Traditional medicines is the very large term and in includes the Varity of the topics from the herbs to the several other combinations, TK the traditional knowledge is the wide term and it includes the Varity of the topic from the art and the agricultures, it is also known as the indigenous knowledge, the TK has its existence in the local communities, where the TK Passes from one generation to the another by the oral transmission of the knowledge from one generation to the another which was based on the long term experiences. TM is the term which is used for the locally available flora’s for the treatment of the many kinds of the disorders, they includes the Ayurvedic medicines, Chinese and japanned medicines and Korean medicines, siddha and the other unani and the homeopathic medicines. Here in this research article we are presenting some of the aspects of the genus Anemone pulsatilla. The species is belonging to the family Ranunculaceae, the genus is also known as the wind flower, Anemone word is taken from the Greek language and meaning of the genus is the wind flower. The plant grows in the windy places. The genus grows in the alpine Himalayas, in the European country in the England and Siberia, the plant parts that is used is the flowering herb.

Keywords: Traditional medicines; Chinese and Japanned medicines; Korean medicines; Ayvervedic medicines; European country in the England and Siberia

Uses

a) The roots are mixed, with milk and given internally.

b) Pulstitial is now particularly used in functions uterines, derange, ends as leucorrhea, amennoerhea, dysmerrorea and other painful action of the pelvic organs,

c) They are also used in rheumatism,

d) They are used in the nervous headaches,
Conclusion

Overall this is the small minireview on the genus *Anemone Pulsitilla*, the genus endemic in the Himalayas and the other part of the world, the genus is detering due to the overexploitation of the plant, the herb is used for the several disorders on the ethno-botanical basis but the toxins are sometimes very toxic and they damage the system, so the people’s needs to be very careful, while using the drug for treatment of the disorders [13-18]. The TM and the ATM are the now a day's main drugs for the rural peoples, they are used for the several disorders, they are cheap and easy to use and safe and they are less toxic in comparison to the other drugs of the chemical origins, the TM and the ATM should be used and they should be conserved for the future uses, however sometimes the eligibility of the TM and the ATM is still the matter of the facts, since they are very toxic and the efficacy is still the question of the debate. The TM and the ATM should be used, they should be formulated in that way the peoples can benefit with them more and more for the suitable utilization of the drugs for the future generations.
